

## How to put the ATA website on a mobile phone's home page

[www.angloturkishassociation.com](http://www.angloturkishassociation.com)

### For iPhone –

Here's how to add a website shortcuts on the iPhone/iPad Homescreen:

1. Open Safari.
2. Type in the web address.
3. After the website loads, tap on the share icon at the bottom.
4. In the share sheet, tap on Add to Home Screen.

### iPhone / Ipad

Launch the Safari browser on Apple's iOS and navigate to the website or web page you want to add to your home screen. Tap the Share button on the browser's toolbar — that's the rectangle with an arrow pointing upward. It's on the bar at the top of the screen on an iPad, and on the bar at the bottom of the screen on an iPhone or iPod Touch. Tap the Add to Home Screen icon in the Share menu.

Launch the Safari browser on Apple's iOS and navigate to the website or web page you want to add to your home screen. Tap the Share button on the browser's toolbar — that's the rectangle with an arrow pointing upward. It's on the bar at the top of the screen on an iPad, and on the bar at the bottom of the screen on an iPhone or iPod Touch. Tap the Add to Home Screen icon in the Share menu.

### For Android Phone

1. Navigate to your **Android web** browser, e.g. Google Chrome. Locate the icon that looks like a globe and tap on it to open.
2. Go to your **website** of choice. ...
3. Tap on the Create Bookmark icon. ...
4. Tap on the drop-down menu. ...
5. Tap "**Home Screen.**" You should now see your new bookmark on your **home screen.**

Launch Chrome for Android and open the website or web page you want to pin to your home screen. Tap the menu button and tap Add to homescreen. You'll be able to enter a name for the shortcut and then Chrome will add it to your home screen.

The icon will appear on your home screen like any other app shortcut or widget, so you can drag it around and put it wherever you like.

Chrome for Android loads the website as a "web app" when you tap the icon, so it will get its own entry in [the app switcher](#) and won't have any browser interface getting in the way.

Other popular Android browsers also offer this feature. For example, Firefox for Android can do this if you tap the menu button, tap the Page option, and tap Add to Home Screen.
